

# Turbine

# Layout of hydroelectric power plant

$$H = H_g - h_f$$

Dam → Constructed across rivers,

1) Reservoir

Natural  
Artificial.

mountains.  
Natural spring.

↓  
Dam.

Appreciable gradient  
or slope required.

Penstock →

Pipes of large diameter  
carry water under pressure.

Made of Steel.

Reinforced concrete

made of Steel  
Reinforced concrete

Control

Value

control the discharge of water

Surge tanks.

Surge drum.

Surge Pool.

Neutralized the sudden changes of pressure in flow.

if we closed the Penstock suddenly.  
then  $\rightarrow$  Flowing water hits  
the gate. <sup>with</sup> Very Large Force.

if we <sup>more</sup> required water. For  
running the Turbine.

Water Hammer Effect  
Hydraulic Shock.

(3) Turbine  $\rightarrow$  having different types of vanes.

Gross head ( $H_g$ )  $\rightarrow$  difference b/w  
head race & tail race.

$$H_g = \text{head race} - \text{tail race}.$$

Energy available at turbine  
inlet.

033el inlet  $\rightarrow$  when ideal  
flow condition  
is consider.  
(No loss)
