

Dishwasher Advantages and Disadvantages

ADVANTAGES OF A DISHWASHER

Since you can put all the kitchen utensils in one wash, it saves time, and it uses less water.

It is more hygienic for final cleaning because hot water can eliminate germs that may have stuck to the dishes or pots and other kitchen utensils.

You can regulate the amount of water and electricity consumed since automatic dishwashers lower or increase the temperature.

To wash glasses, cups, and less dirty items, the dishwasher uses a lower temperature. The higher temperatures will be used for pieces such as pots, pans, and frying pans.

You can choose ecological models that regulate the amount of water and electricity consumed.

DISADVANTAGES

The machine takes up a large space in your kitchen.

Some brands of machines use more water, so you should think about which one you choose to buy.

It is another household appliance that will need care and maintenance.

ADVANTAGES OF WASHING DISHES BY HAND

If your family is small, it is more convenient to wash by hand because you have a few dishes and utensils to wash.

It is an excellent way to get children involved in the house chores, take some responsibility, and help with daily chores.

DISADVANTAGES

You spend more time in the kitchen and less time with your family.

You must wash by parts, first glasses, then finish with pots and implements for cooking.

You must spend more time standing up and using your hands, even if you wear gloves, you will undoubtedly always damage your manicure and probably your skin.

You can not regulate the temperature of hot water, and you may not hygienically clean your utensils properly.
