

note

$4 \nmid p-3$  then non zero elements of  $\mathbb{Z}_p[i]$  does not form a group wrt multiplication.

$4 \nmid p-3$  then  $\mathbb{Z}_p[i]$  is not ID  
 $\Rightarrow \mathbb{Z}_p[i]$  has zero divisors  
 $\Rightarrow a \neq 0, b \neq 0$ , but  $ab=0$

Consider  $G = \mathbb{Z}_p[i] \setminus \{0\}$ ,  $(G, \times)$  is not a group

Logic  $\exists x, y \in \mathbb{Z}_p[i]$   
 but  $xy = 0$   
 but  $0 \notin \mathbb{Z}_p[i] \setminus \{0\}$

So  $\mathbb{Z}_p[i] \setminus \{0\}$  does not form a group if  $4 \nmid p-3$

## Fundamental Table

S.I	order of ring	# non isomorphic Ring
1	1	1 ( $\mathbb{Z}_1 = \{0\}$ )
2	2 (p)	2 $\begin{cases} \mathbb{Z}_2 \\ \mathbb{Z}_2 \end{cases}$
3	3 (p)	2 $\begin{cases} \mathbb{Z}_3 \\ \mathbb{Z}_3 \end{cases}$

note  $4 \mid O(R) \leq 3$  then R is always commutative

4	4 ( $2^2$ )	11 $\begin{cases} \mathbb{Z}_4 \\ \mathbb{Z}_2 \times \mathbb{Z}_2 \\ GF(2^2) \end{cases}$
5	5	2 $\begin{cases} \mathbb{Z}_5 \\ \mathbb{Z}_5 \end{cases}$
6	6	4 $\begin{cases} \mathbb{Z}_6 \\ \mathbb{Z}_2 \times \mathbb{Z}_3 \\ \mathbb{Z}_2 \times \mathbb{Z}_3 \\ \mathbb{Z}_2 \times \mathbb{Z}_3 \end{cases}$
7	7	2 $\begin{cases} \mathbb{Z}_7 \\ \mathbb{Z}_7 \end{cases}$
8	8	52 $\begin{cases} \mathbb{Z}_8 \\ \mathbb{Z}_2 \times \mathbb{Z}_4 \\ GF(2^3) \end{cases}$
9	9 ( $3^2$ )	11 $\begin{cases} \mathbb{Z}_9 \\ \mathbb{Z}_3 \times \mathbb{Z}_3 \end{cases}$

Subring Let  $S$  be a non empty subset of  $R$   
 $(S, +, \cdot)$  is subring of  $(R, +, \cdot)$  if

(i)  $\forall a \in S, \forall b \in S \Rightarrow a-b \in S \Rightarrow (S, +)$  is subgroup of  $(R, +)$

(ii)  $\forall a \in S, \forall b \in S \Rightarrow a \cdot b \in S$

(iii)  $(S, +, \cdot)$  is itself a ring

EX:  $\mathbb{Z} \neq \emptyset, \mathbb{Z} \subseteq \mathbb{Q}/\mathbb{R}/\mathbb{C}$  and  $(\mathbb{Z}, +, \cdot)$  is a ring then  
 $(\mathbb{Z}, +, \cdot)$  is subring of  $(\mathbb{Q}, +, \cdot), (\mathbb{R}, +, \cdot)$  and  $(\mathbb{C}, +, \cdot)$

(iv)  $\mathbb{Z}[i] \neq \emptyset, \mathbb{Z}[i] \subseteq \mathbb{C}[i]$   
 $(\mathbb{Z}[i], +, \cdot)$  is a ring  
 $\Rightarrow (\mathbb{Z}[i], +, \cdot)$  is subring of  $(\mathbb{C}[i], +, \cdot)$   
 only  $(\mathbb{Z}[i], +, \cdot)$  is subring of  $(\mathbb{Q}[i], +, \cdot)$

note:

If  $(S, +, \cdot)$  is subring of  $(R, +, \cdot)$  then  $(S, +)$  is subgroup of  $(R, +)$  but converse need not be true.

Q  $S = \left\{ A = \begin{bmatrix} a & \text{tr}(A) \\ \text{tr}(A) & b \end{bmatrix} ; a, b \in \mathbb{R} \right\}$  is subring of  $M_2(\mathbb{R})$  ??

Subring  $\Rightarrow$  subgroup  
 $\neq$  let

$$A_1 = \begin{bmatrix} a_1 & a_1 + b_1 \\ a_1 + b_1 & b_1 \end{bmatrix} \in S$$

$$A_2 = \begin{bmatrix} a_2 & a_2 + b_2 \\ a_2 + b_2 & b_2 \end{bmatrix} \in S$$

$$A_1 - A_2 = \begin{bmatrix} a_1 - a_2 & a_1 + b_1 - a_2 - b_2 \\ a_1 + b_1 - a_2 - b_2 & b_1 - b_2 \end{bmatrix} = \begin{bmatrix} a_1 - a_2 & \text{tr}(A_1 - A_2) \\ \text{tr}(A_1 - A_2) & b_1 - b_2 \end{bmatrix}$$

$a_1 - a_2 \in \mathbb{R}, b_1 - b_2 \in \mathbb{R}$

$\therefore A_1 - A_2 \in S$  is subgroup of  $M_2(\mathbb{R})$

$$A_1 A_2 = \begin{bmatrix} a_1 a_2 + (a_1 + b_1)(a_2 + b_2) & a_1(a_2 + b_2) + b_2(a_1 + b_1) \\ a_2(a_1 + b_1) + b_1(a_2 + b_2) & (a_1 + b_1)(a_2 + b_2) + b_1 b_2 \end{bmatrix}$$

$$\text{tr}(A_1 A_2) \neq a_1(a_2 + b_2) + b_2(a_1 + b_1)$$

$\therefore$  (i) fails  
 $\therefore S$  is not subring

Q Show that  $S = \left\{ \begin{bmatrix} a & b \\ 0 & 0 \end{bmatrix} ; a, b \in \mathbb{R} \right\}$  is a subgroup of  $M_2(\mathbb{R})$

$$A_1 = \begin{bmatrix} a_1 & b_1 \\ 0 & 0 \end{bmatrix} \in S, \quad A_2 = \begin{bmatrix} a_2 & b_2 \\ 0 & 0 \end{bmatrix}$$

$$A_1 - A_2 = \begin{bmatrix} a_1 - a_2 & b_1 - b_2 \\ 0 & 0 \end{bmatrix} \in S \quad \begin{array}{l} a_1 - a_2 \in \mathbb{R} \\ b_1 - b_2 \in \mathbb{R} \end{array}$$

$\therefore (S, +, \cdot)$  is a subgroup of  $M_2(\mathbb{R})$

$$A_1 A_2 = \begin{bmatrix} a_1 & b_1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} a_2 & b_2 \\ 0 & 0 \end{bmatrix} = \begin{bmatrix} a_1 a_2 + 0 & a_1 b_2 + 0 \\ 0 & 0 \end{bmatrix} \in S$$

$\therefore (S, +, \cdot)$  is a subgroup of  $M_2(\mathbb{R})$

Q  $S = \left\{ \begin{bmatrix} 0 & b \\ 0 & 0 \end{bmatrix} ; b \in \mathbb{R} \right\}$  is a subgroup of  $M_2(\mathbb{R})$

Q  $(m\mathbb{Z}, +, \cdot)$  is a subgroup of  $(\mathbb{Z}, +, \cdot)$  iff  $(m\mathbb{Z}, +)$  is a subgroup of  $(\mathbb{Z}, +)$

Pf If  $(m\mathbb{Z}, +, \cdot)$  is a subgroup of  $(\mathbb{Z}, +, \cdot) \Rightarrow (m\mathbb{Z}, +)$  is a subgroup of  $(\mathbb{Z}, +)$ .

Converse:  $m\mathbb{Z} = \{0, \pm m, \pm 2m, \dots\}$   
 $= \{ma, a \in \mathbb{Z}\}$
