

E-Content of INTERNET TECHNOLOGY AND WEB DESIGN

Chapter: 8.8 Components of Web Publishing

Topic: 8.8.1 Components of Web Publishing

Components of Web Publishing

- There are various components of web publishing.
 - Document management
 - Hosting to Web
 - Managing security
 - Maintaining the site
 - Copyright

Document Management

- Document management is a science into itself.
- The windows and Macintosh environments were important in developing the concept of compound documents.
- A compound document starts as a document created in an application like Microsoft Word, i.e., it starts as a text document.
- The document is viewed as a container that can hold objects such as graphics, voice clips and video clips.
- These objects are either
 - Embedded or
 - Linked.
- **Embedded Object**
 - As embedded object such as picture travels with the document but can still be edited using an appropriate application.
- **Linked Object**
 - A linked object may be stored in another location.
 - The document simply contains a link to the object at that location and may display it as well.
