

EMBL

- The European Molecular Biology Laboratory (EMBL) is an intergovernmental organization dedicated to molecular biology research
- EMBL was created in 1974
- Research at EMBL is conducted by approximately 110 independent research

The Laboratory operates from six sites:

- The main laboratory in Heidelberg,
- Hinxton (the European Bioinformatics Institute (EBI), England
- Grenoble (France),
- Hamburg (Germany),
- Rome (Italy) and
- Barcelona (Spain)

- 
- The EMBL-EBI developing and maintaining a large number of scientific databases
 - At Grenoble and Hamburg, research is focused on structural biology

- 
- The EMBL Rome site is dedicated to the study of epigenetics and neurobiology
 - Heidelberg, there are units in cell biology and biophysics, developmental biology and genome biology

EMBL Imaging Centre

provides a unique service facility for the life sciences by combining the latest imaging technologies

- 
- EMBL Advanced Training Centre (ATC)
 - EMBL's European Learning Lab for the Life Sciences (ELLS)

Science and Society Programme

- European Molecular Biology Organization (EMBO)
