# UNIVERSITY INSTITUTE OF ENGINEERINGAND TECHNOLOGY, CSJM UNIVERSITY, KANPUR Operation research (MEE-S504) 

## Mid-1 Semester Examination

Time: 1.5 h
Maximum marks: $\mathbf{3 0}$

## Section-A

1. A company has three plants at locations $A, B$ and $C$ which supply to warehouses located at $D, E, F, G$ and Monthly plant capacities are 800, 500 and 900 units respectively. Monthly warehouse requirements are 400, 400, 500, 400 and 800 units respectively. The unit transportation costs are given below:

|  | Warehouse | Warehouse | Warehouse | Warehouse | Warehouse | Plant <br> Capacity |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Plant (A) | 5 | 8 | 6 | 6 | 3 | 800 |
| Plant (B) | 4 | 7 | 7 | 6 | 6 | 500 |
| Plant (C) | 8 | 4 | 6 | 6 | 3 | 900 |
| Warehouse <br> Requirement | 400 | 400 | 500 | 400 | 800 |  |

(a) Find initial feasible solution using north west corner method
(b) Find initial feasible solution using least cost method
(c) Find initial feasible solution using vogel approximation method.
(d) Determine an optimum distribution for the company, in order to minimise the total transportation cost.
(Note: Use u-v method or stepping stone method to find the optimum solution)

$$
[1+2+2+5]
$$

## Section-B

2. Five men are available to do five different jobs. From past records, the time (in hours) that each man takes to do each job is known and is given in the following table:

Jobs

|  | I | II | III | IV | V |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | 2 | 9 | 2 | 7 | 1 |
| B | 6 | 8 | 7 | 6 | 1 |  |
| C | 4 | 6 | 5 | 3 | 1 |  |
| D | 4 | 2 | 7 | 3 | 1 |  |
| E | 5 | 3 | 9 | 5 | 1 |  |

3. Solve the LP problems graphically
(i) $\operatorname{Min} Z=4 x_{1}-2 x_{2}$

Subject to $x_{1}+x_{2} \leq 14$

$$
\begin{align*}
& 3 x_{1}+2 x_{2} \geq 36 \\
& 2 x_{1}+x_{2} \leq 24 \\
& x_{1}, x_{2} \geq 0 \tag{4+4}
\end{align*}
$$

## Section-C

4. A company is manufacturing two different types of products $A$ and $B$. Each product to be processes on two machines $M_{1}$ and $M_{2}$. Product $A$ requires 2 hours on machine $M_{1}$ and 1 hour on machine $M_{2}$, product $B$ requires 1 hour on machine $M_{1}$ and 2 hours on machine $M_{2}$. The available capacity of machine $M_{1}$ is 104 hours and that of machine $M_{2}$ is 76 hours. Profit per unit for product $A$ is Rs. 6 and that for $B$ is Rs 11 . Calculate (i) Formulate the problem (ii) Find out the optimal solution by Simplex method.
5. Solve the LP problems graphically
$\operatorname{Min} Z=3 x_{1}+5 x_{2}$
subject to $-3 x_{1}+4 x_{2} \leq 12$

$$
\begin{aligned}
& 2 x_{1}-x_{2} \geq-2 \\
& \mathbf{2} \boldsymbol{x}_{\mathbf{1}}+\mathbf{3} \boldsymbol{x}_{\mathbf{2}} \geq \mathbf{1 2} \boldsymbol{x}_{\mathbf{1}} \leq \mathbf{4} ; \boldsymbol{x}_{\mathbf{2}} \geq \mathbf{2} \text { and } \boldsymbol{x}_{\mathbf{1}}, \boldsymbol{x}_{\mathbf{2}} \geq \mathbf{0}
\end{aligned}
$$
