

(ii) Order Axioms - The order relation  $>$  called greater than between pairs of real numbers satisfy the following axioms—

(O1) Law of Trichotomy - If  $a, b \in \mathbb{R}$ , then one and only one of the following is true—

- $a > b$
- $a < b$
- $a = b$

(O2) Transitivity Law - If  $a, b, c \in \mathbb{R}$ , then—  
 $a > b, b > c \Rightarrow a > c$

(O3) Monotone Property for Addition - If  $a, b, c \in \mathbb{R}$  then—  
 $a > b \Rightarrow a + c > b + c$

(O4) Monotone Property for Multiplication—

If  $a, b \in \mathbb{R}$  and  $c > 0$  then—  
 $a > b \Rightarrow ac > bc$

In view of the above axioms, the set  $\mathbb{R}$  is said to be ordered.

Hence  $\mathbb{R}$  is an ordered field.

$\mathbb{R}^+$  is the set of positive real numbers  
 $\mathbb{R}^-$  is the set of negative real numbers.

(iii) Completeness Axiom - Every non-empty bounded above subset of real numbers  $\mathbb{R}$  has a supremum in  $\mathbb{R}$ .

### Properties of Real Numbers -

→ Algebraic Properties →

- ① The additive identity in  $\mathbb{R}$  is unique.
- ② The additive inverse of each element is unique.
- ③ If  $a, b, c \in \mathbb{R}$ , then  $\rightarrow$   
 $a+c = b+c \Rightarrow a=b$  ;  $c+a = c+b \Rightarrow a=b$
- ④  $a+b=0 \Rightarrow b=-a$
- ⑤  $-(-a) = a$
- ⑥ The multiplicative identity in  $\mathbb{R}$  is unique.
- ⑦ The multiplicative inverse of each element in  $\mathbb{R}$  is unique.
- ⑧ If  $c \neq 0$ , then  $a \cdot c = b \cdot c \Rightarrow a=b$  &  
 $c \cdot a = c \cdot b \Rightarrow a=b$

⑨  $a \cdot b = 1 \implies b = a^{-1}$

⑩ If  $a \neq 0$ , then  $(a^{-1})^{-1} = a$

⑪  $a \cdot 0 = 0 \quad \forall a \in \mathbb{R}$

⑫ (i)  $a \neq 0$  and  $b \neq 0 \implies ab \neq 0$

(ii)  $a \cdot b = 0 \iff$  either  $a = 0$  or  $b = 0$

⑬  $a \cdot (-b) = -(a \cdot b) = (-a) \cdot b$

⑭  $(-a)(-b) = a \cdot b$ ,  $(-1) \cdot a = -a$

⑮  $(a \cdot b)^{-1} = a^{-1} b^{-1}$  provided  $a \neq 0, b \neq 0$

⑯ If  $a, b \in \mathbb{R}$  then the eq<sup>n</sup>  $x + a = b$  has a unique sol<sup>n</sup>  $x = b - a$  in  $\mathbb{R}$ .

⑰ If  $a, b \in \mathbb{R}$  and  $a \neq 0$  then the eq<sup>n</sup>  $a \cdot x = b$  has a unique sol<sup>n</sup>  $x = \frac{b}{a}$  in  $\mathbb{R}$ .
