

Desertification

Destruction of nutrients or minerals of land leads to desertification. This is a serious threat to economy and environment.

- .

Causes of Desertification in India

Natural Causes

High rain fall, Storms, High wind during summers, Floods etc

Anthropogenic Causes

1. Human population
2. Livestock (Domesticate animals)
3. Overgrazing by cattle or livestock.
4. Deforestation
5. Mining activity
6. Rotation of Crop

Human population

Livestock

Overgrazing

Deforestation

Mining activity

Crop Rotation

**Effects
Of
Desertification**

Loss of Flora and Fauna

Loss of Ecosystems

Loss of Wild Life

Soil erosion

Water cycle will be
change

**Toxicants will
increase in the
environment**

How To Control Desertification

1. Reforestation
2. Sustainable agriculture
3. Uses of Mixed Cropping
4. Sprinkling Irrigation
5. Bio fertilizers Uses
